PAIRINGS

Find your match.

UNC GREENSBORO
Department of Computer Science

Purpose

The goal of pairings is to give users easy access to information about different wines and dishes that pair well with each other. The application is designed to serve wine consumers of all experiences.

System Design Approach

A multiplatform mobile application with APIs to help build core function.
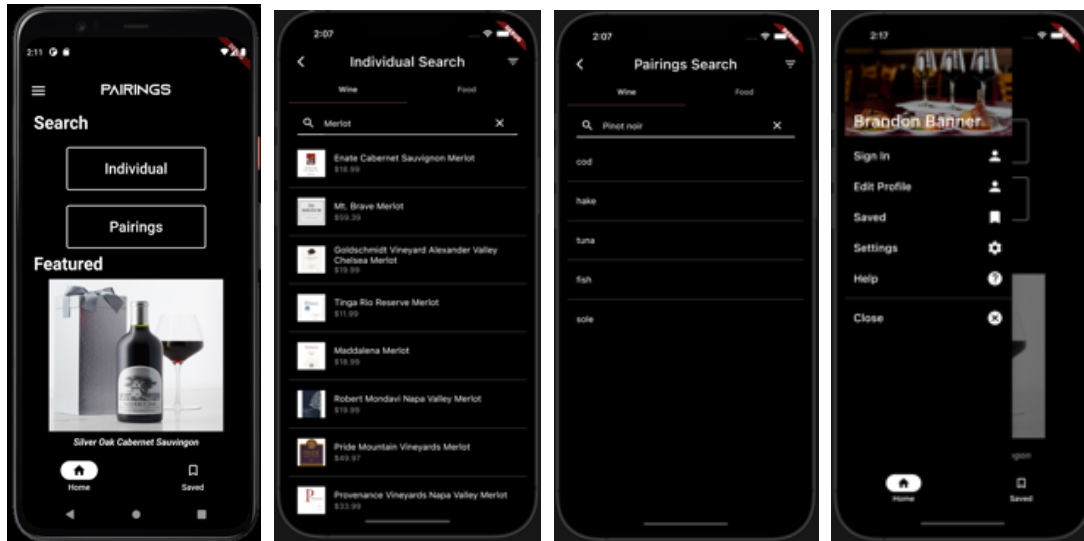

UI Design Approach

A simplistic, sophisticated, mature application, that is focused on the best, most engaging user experience.
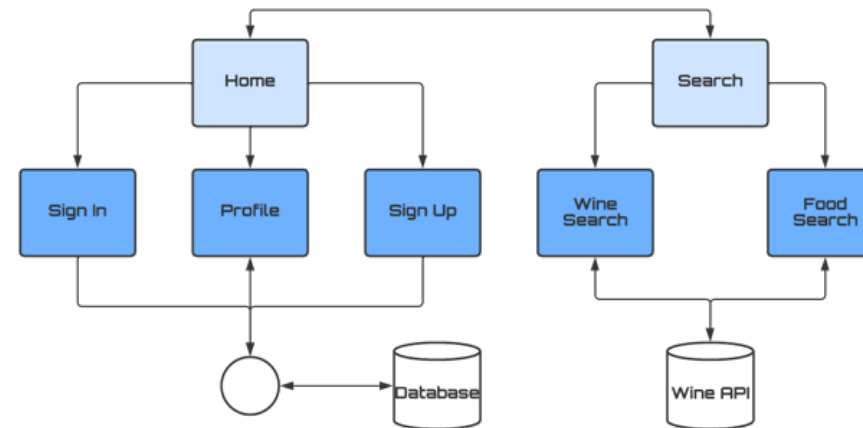

CSC 490-02:
Professor Kevin Liu
